Tarachand Gupta | AI Product Manager

+91 88988 11591 | tarachandragupta2784@gmail.com | linkedin.com/in/tarachand-gupta

Technical Product Manager with **5+ years in full-stack development and AI product engineering**. Leads an **18-person team** at PureCode, combining system design, hands-on prototyping, and implementation guidance.

Experience

PureCode AI | Hyderabad / Remote
Technical Product Manager *Jan 2023 - Present*

- Lead technical direction for the **VS Code Assistant and Cloud Agent**, translating developer needs into architecture, feature scope, and UX; deliver weekly fixes and fortnightly features with an **18-person team** across AI research, engineering, DevOps, and project management.
- Raised internal task success from **82% to 90-95%** through **context engineering** over six months in early 2026, improving the agent's ability to complete coding tasks across existing projects.
- Evaluate every new model and prompt improvement in **Langfuse with reasoning-model LLM judges**; update the judge model as evaluation needs change to assess the effect of changes on task quality.
- Improved token-cost efficiency by an internally estimated **3x** through **prompt caching, stale-context pruning, and automatic summarization**.
- Architected and prototyped **dynamic, specialized subagents** to parallelize independent tasks, keep the main context focused, and control token cost; designed a **shared scratchpad** for progress coordination across agents.
- Designed **tool and terminal permissions and file protection** so developers control where agents can act, which commands need approval, and which files remain protected during autonomous work.
- Prototyped the **MCP host** for external-tool integration and guided **developer-in-the-loop tools** so agents can request clarification when a task needs human input; supported reusable skills and shared instructions across workflows.
- Shaped **hybrid retrieval, reranking, and repository maps** to help agents find relevant code across existing projects, combining embedding-based search, full-text retrieval, and symbol exploration.
- Architected and prototyped **file-based memory** to retain useful context across sessions, with separate user and project scopes and on-demand recall so agents can reuse information without loading every stored detail.
- Guided cloud execution in **isolated environments**, with checkpoints and validation-to-pull-request workflows that let developers review and recover agent changes before incorporating them into their projects.
- Product results included **monthly paid-subscriber retention rising from 65% to 70% over eight months**, and **90% monthly enterprise customer retention**, excluding new customers.
- Built an **image-to-code ML pipeline** with YOLOv7-based UI detection and an intermediate domain-specific language (DSL), supported by tools for collecting, cleaning, and preparing training data.
- Engineered a **DSL-to-code transpiler** for multiple frontend frameworks, supporting theming, reusable components, and configurable code patterns so generated interfaces could fit different application requirements.
- Helped build the **UI-generation platform and chat-based iteration**, allowing developers to refine generated components; guided subscription, payment, and workspace systems supporting teams using the product.

Ovonts | Mumbai
Product Engineer *Nov 2021 - Jan 2023*

- Architected an **end-to-end campaign analytics and monitoring platform**, connecting on-site events with influencer-content performance to support campaign ROI analysis.
- Designed **event-tracking SDKs** for integration across languages and websites, with **WordPress and e-commerce plugins** for collecting campaign events from customers' sites and stores.
- Led the design of **scraping and data-collection pipelines** for Instagram and other influencer-content platforms, bringing content performance metrics into campaign monitoring and analysis.
- Developed the architecture for an **influencer discovery module** using deterministic rules, **probabilistic classification, and regression** to estimate demographics and profile attributes for campaign targeting.
- Built **RBAC with resource-level permissions and dynamic roles**, API-key access, and multi-account/workspace capabilities, alongside subscriptions and session management.
- Maintained **AWS infrastructure, Docker-hosted services, and CI/CD pipelines**; adapted open-source tools to product requirements and integrated them into the platform.
- **Reviewed code and mentored engineers** through implementation and deployment, helping resolve architectural issues across the analytics platform and its supporting services.

1st Main | Bengaluru
Full Stack Developer *Jul 2021 - Nov 2021*

- Built **React** interfaces with Material UI, Styled Components, and Ant Design; implemented application state and asynchronous workflows with **Redux Toolkit and Redux-Saga**.
- Deployed APIs on **Google Cloud Platform (GCP)** with Firestore integration and developed **SendGrid** services for transactional and marketing email.
- Integrated **Shopify GraphQL** services for an e-commerce website.

Core Skills

AI Systems

- LLM applications
- RAG & hybrid retrieval
- Prompt engineering & caching
- MCP host, client & server
- Langfuse
- Multi-agent orchestration
- Embeddings & reranking
- Context pruning & summarization
- Agent skills & cloud agents
- LLM-as-a-judge evaluation
- Dynamic & specialized subagents
- Context engineering
- File-based memory
- Tool & terminal guardrails
- Model & prompt evaluation

Engineering

- Python, Java & C++
- Node.js & Express
- PostgreSQL & NoSQL
- Redux & Zustand
- Multi-tenant SaaS & RBAC
- AWS, Azure, GCP & Vercel
- JavaScript, HTML & CSS
- FastAPI & REST APIs
- Redis & vector databases
- Tailwind CSS & Material UI
- Application & database design
- Docker & server management
- React, Next.js & Vite
- GraphQL & WebSockets
- Message queues
- React Native & Expo
- Subscriptions & workspaces
- GitHub Actions & CI/CD

Technical Leadership

- System design
- User interviews
- Code & design reviews
- Solution engineering
- Developer UX & user flows
- Engineering mentorship
- Prototyping & technical feasibility
- Roadmapping & feature scoping
- Cross-functional leadership

Education

Bachelor of Engineering | Universal College of Engineering, Mumbai | 7.8 CGPI | June 2021

Diploma in Information Technology | Pravin Patil College of Diploma, Mumbai
